every country, county, city and nook has its indigenous hero, its native son. russia has its karl marx, stratford has its shakespeare, alabama has its wallace, and liverpool has its beattles.

if you live in worcester, which is soaked through with the traditional blood of "new englandism," you won't refuse a breath of praise for the TECHMAN.

you might even agree that he is the reformist-messiah that worcester has awaited all these static years. it's an empirical fact that he has contributed more to worcester citizenry than any other son: if not with the insuperable prestige of the goddard rockets or of the morgan steam rollers, at least with the 99 years of financial welfare he has contributed.

the TECHMAN has no equal in his native habitat. he is the first local martyr, with bob cousy dribbling in second place followed only by george wells. of course, we cannot deny the potential martyrdom of the holy cross man or clark man, for they too have their images. but how can we rightfully adopt a native son from the cross when his legal home is in rome? and equally impossible would it be to domesticate the clark species, most of whose life is spent "on the road."

tech is commensurate not only with the worcesterian soul but with the entire new england mystique. the TECHMAN'S manner of speech, dress, the freshness and candor of his physiognomy, his deathless attachment to independence, his aversion to anything abstract or indecorous, his self-esteem and self-pity, his curious temperament all tend to dissolve a starched social system.

to be a *TECHMAN* in boston may get you a good laugh, but in worcester you get two shirts cleaned free. here he is more esteemed and distinguished than is a harvard man, a yale man, an oxford man, or a neanderthal man. even the metabolism of the tech life has its prestige ratings. for example, when a cross man is sick, people immediately assume he is drunk. when the *TECHMAN* is drunk, people assume he is sick.

*when the lady knows he's from the hill,
there isn't anything she won't do for the
TECHMAN. in the same light of loyalty,
waitresses and cabbies refuse tips from
the gentleman in the "worcester tech"
sweatshirt. even the police will overlook
the illegally parked cars distinguished by
the w.p.i. decals. it seems as if the hand
of john boynton's ghost just reaches out
to the tumid heart of worcester squeezing
endless drops of the sweet balsamic juices
of love.*

*"then, what be this majestic, wondrous
tech?" you ask. perhaps the tired and
stainless genius of ancient thinkers, or
a colosseum where brains are split under
the gilded academic sword, or maybe a
bunch of brick and ivy bulwarking dear
old mrs. higgins.*

to some students, tech is merely the reality of a tin man's dream—did he foresee a degree granting organization of musty fact-stuffed professors, frustrated, work stuffed students, and fifty thousand text books pregnant with empirical formulas, empirical diagrams, empirical tables, empirical proofs-left-for-student, empirical even-numbered-problems-answers, empirical intuitively-obviousness, empirical empiricalness . . .

*then there is the guy whose tech is the
next best thing to the french riviera: the
idyllic institute pond with its lush, grassy
banks ornamented with clusters of lovely
becker girls lying around in abandoned
attitudes.*

A black and white photograph showing a woman from the back, wearing a light-colored, short-sleeved blouse and a dark, knee-length skirt. She is standing next to a man who is partially visible on the right, wearing a light-colored shirt. The background is dark and indistinct.

TECHMEN have no cheerleaders with cute pink knees. they don't have any girls, except for a few dozen untouchable secretaries and library matrons—all theoretically equipped with knees.

but who can think about knees when we have one of the nations few one-kilowatt swimming pool nuclear reactors in our laps? a true hedonist, the TECHMAN takes his sensuality where he finds it: a three hour thermo lab on a warm afternoon in may, the sinuous curves of a slithering smith chart, a frolic with a few of those adorably french laplace transforms in a lumped-parameter circuit analysis. and if he is a thoreau-type sybarite, he can take a few civil courses and count cars for three hours on park avenue, or survey cow pastures and unfilled parking spaces at b.t.

when it comes to uniqueness, tech stands majestic. no one can compare with the TECHMAN, not even another TECHMAN. yet, for some strange reason, TECHMEN must be "TECHMEN," a word often confused with "images." whether competition likes it or not, tech is tech. historically speaking, how many engineering colleges that you can think of were founded by a frustrated, illiterate, yet filthy-rich peddler of tin pans?

how many other colleges have as their motto: "you can tell a TECHMAN if he admits it." or what other institution could be considered the first launch pad of american rocketry, and still be unknown beyond a ten mile radius. yet there was only one colossus at rhodes, no matter how many jolly green giants roam the earth; and all the prayers of man couldn't turn the atlantic ocean into a martini.

*scholastically, the TECHMAN is a lance-
lot in relentless pursuit of truth: he is re-
markably loyal, romantically fearless, and
dreadfully mortal. of course, he wasn't al-
ways this way. (even lancelet started off
as a lowly page working his way through
knight school.) nowadays, this ephemeral
novice is the high school senior. when he
first falls into tech's hands, he is nothing
more than a flesh-colored mollusk, "bar-
niced" with national honor society pins,
and full of unripened baby fat and sunday
school ideals about college. his only*

noticeable virtue is his humility before a twelve inch piece of wood labeled "log-log duplex decitrig slide rule." his personal belongings are unmistakably those of the novice. some of the universal possessions among entering freshmen include: his long-hidden heffner harvest, a joan baez album, two volumes of "quantum mechanics made simple," last year's science fair ribbon, and an autographed picture of werner von braun. (of course, we mustn't forget that new world stamp album he plans to complete in his leisure hours.)

the necessity of change for our neophyte is painfully evident, yet not always accomplished. for the submissive, nevertheless, the metamorphosis is spontaneous, beginning with the payment of his first tuition bill and ending with his first "dear alumnus" mail. after a week, he has already abandoned the notion of an eight-hour night of sleep. (early to bed and early to rise makes a man go on pro.) he experiences his first trauma when he discovers that all things in life have rigorous mathematical significance. even the mystical arrow of cupid has been redefined as the "love vector." it doesn't take him long to realize that "there are more things in heaven and earth" than were mentioned in the catalogue. he no longer approaches the prodigious accumulation of knowledge

in his first physics assignment as he once attacked an alarm clock. his once casual curiosity about newton and space suddenly swells into a magnificent, metaphysical bubble. momentarily, he loses himself in the cosmos of his imagination: gayly he swings between the galaxies on the golden locks of the muses of truth. still in his scientific nirvana, he sees himself taxiing his way through the ether with john glenn. at different stations in the infinitude he stops to pick up such noticeable passengers as plato, einstein and edison from whom he manages to hijack a sliderule case full of omniscience. then almost to heaven, on the point of the ultimate in mystical info, he unexpectedly crashed into earth and into the agonizing reality of olin 107.

in the rat race for his bachelor's degree, the frosh is magnificent off the line. his miraculous enthusiasm and vigor "is enough to stagger sextillions" of upper-classmen. but the highest is yet to come. besides losing five pounds of naiveté, he must find some way to exercise that 135 iq his parents so lovingly gave him. they know he has it, he thinks he has it, and the deans pray he has it.

sitting timidly before his open text, he once more transcends the realm of his dormitory room. back into that all-revealing cosmos of imagination his soul takes flight, "can i do it? can i do it?" whines a lost voice. "will i ever be able to figure out all this empirical (profanity)?" a second voice reassures, "well, guidance counselors never make mistakes. besides, you always displayed keen mechanical aptitude with clocks and portable radios. (and anyway, with such lousy verbal scores, you have no choice but to become an engineer.) "but what would mom say," asks the first voice again, "if i flunked out and never get that nobel prize she planned on?"

thus, without any awareness, our classic frosh takes his first giant step towards his goal. drifting clumsily through personal orientations, formulas, exams, fraternity rushing, social and academic hazing, the current model TECHMAN flops into his sophomore year. no longer a novice at that chess game with fate, the sophomore wears his battle scars as reference points for future reminders. on the way to canossa and back again, he's managed to refurnish his

brain with those curious little knick-knacks of "observation and reason and conclusion." even the last drop of once precious naiveté has been wrung from his brain to grease the gears of the fraternity wrack. nor did this ordeal develop without its lump of painful evolution. and now with a greek affiliation and a department affiliation, our classified son whispers through his sophomoric state as an unseen, unknown and uncertain figure.

at the halfway mark in his career the TECHMAN reflects. his searching eye spies the knotted fibers of his spirit. oh, to unravel a purpose to all these trivialities. just a fresh nineteen years of age and already he has tired blood. he can't understand why he didn't go to the university with the rest of the guys and have a blast. think of all that partying, and girls, and booze and

following closely with the scheme of things, our stereo-stoic makes his way, with the rest of his ascetic followers, and beneath his own little bo tree he experiences his annual revelation. this time he envisions two gayly painted spaceships, one all red and the other a red-white-blue striped, simultaneously launched from their respective pads. the two vehicles race toward the moon which patiently awaits her first realators. and when, at last, the lunar dust has settled, and the race is won, a bright red moon casts its light on the tear-filled eyes of that benedict arnold of technology, the cynical sophomore. "america needs me" he screams to himself. "i can't be a lunar louse, and let the communist imperialists claim space." now with patriotism bursting the seams of his departmental sweatshirt, nuovo homo pole vaults his summer vacation, joyously deposits another three thousand dollars in the "t" box in boynton hall, and launches a new semester's worth of efforts to save the western satellites.

the junior year passes swiftly, and so does the idealism. by midterms, our protagonist has already renounced his academic faith. (back in that old familiar rut again; another year of advanced suffering.) this time the fragrant gloom of studies becomes so thick, that to survive he must find a diversion. (recall the proverb: "all work and no play makes jack a scab") thus, the junior is wisely reserved for beer drinking, status seeking, love laboring, mark dropping, and generally, "good old college fun." with the first fifty dollars won in cards, the junior TECHMAN re-ivies himself with the latest in tweed sweat-shirts and sneakers.

impressing freshmen and vassar girls alike with his fount of collegiate humor and his collection of assorted society buttons, bents and beanies, junior refuels his ego tank. from campaign to campaign, our own huey long politics his way into the limelight of engineering fame. he is president of every campus organization and an athletic hero. he is a personal friend with all the deans, and serves as the presidents student liaison. his influence is monumental to the student body, yet awfully trivial to the professorial mind. and, needless to say, when finals come, the "paths of glory lead but to summer school."

packing away his wreath of ivy, laurels and olive sprigs, the junior achiever bids adieu to another year. six whole semesters behind him, and what to show for it? a few close friends, some good elephant jokes, three gray hairs, and a "d" in thermo.

*all this, and he still hasn't "found himself":
the greatest expectation of all collegians.
frantically he ferrets through his cerebral
card catalogue from "angstrom" to "zen"
in search of that long lost ticket: identity.
"i must have meaning, purpose!!"*

ahhh, how bitter are the seeds of confusion's fruits in the mouth of a "sensitive, young man." how sad is the song of himself. "in dubious battle" for three years with his comrades, he has helplessly watched his mind become enslaved; he has unwillfully mastered manhood; he has rooted his character into the rock of worcester; he has sounded from the rooftops of boynton hall his "barbaric yawp"; he has even sniffed the hemlock.

"what to be, or what not to be, that is the question!"

there is only one important image in the eye of the TECHMAN who endures until his senior year: the black mortarboard and tassel. now he can almost hear the baccalaureate sermon: "welcome to the great worcester tech family . . ."

faster and faster rides the anticipation on his mind, hurdling its way to that cold, rainy morning in June. hail, hail to graduation the antiseptic of his soul, the culmination of a four act ordeal. at last a liberation, a launching into the orb of things. at last he and his sheepskin can go hand in hand through life doing what they always wanted to do: ahhh . . .

yes, it's that annual panic jamboree again at old worcester tech where some two hundred and sixty seniors begin climbing those "ivy covered walls." what to do with a b. s. degree in engineering? there is always grad school, the home of the well rounded specialist: just a few more years of rigorous study and then the real prestige filled degree. then there is the army. (see rotc section.)

*but think of industry, that nation wide
laboratory with all the empirical freedom
you could hope for. think of the space
race, think of that innocent becker girl
you'd like to marry, of a nice duplex home
nestled in the bowels of suberbia, and that
second hand sports car you always wanted.
recall the bills you owe. oh, oh, oh, how
those greener pastures of capitalism
beckon.*

*and as the sun silently sets on the work
transmitter towers in the horizon, the
proud, transfigured form of the engineer
emerges onto his quadrangle for the
last time. he stops at the center, the cross-
roads (please note symbolism), as he scans
a few radians of the campus.*

*in the distance echo the songs of the land:
the cacophonous laughter of seventeen
year old high school girls, the endless
heartbeat of wyman-gordon, and a famil-
iar voice of the radio discjockey. behind
him, a continuous stream of light spirals
its way upward to the dark, intimate prize
atop another hill. the ether above trans-
figures the grotesque worcesterian outline
below. all is calm.*

all the turbulence of past strife has subsided. only the last impression of his college days snuggles into his brain. then from the east, a thin, red human form stealthily approaches. suddenly all the crystal facets of thought and reverie are unmercifully shattered: "helloooooooooo."

there can be no requiem for a TECH-MAN. he is and always will be a "world without end." he is a living, breathing organic fixture of the american scene. though his eyes may never greet the campus site again, the birthrites of tech go with him in his travels. whatever he relinquished to his cause in the "lean years," we can only forget. what he managed to extract from those days we could only conjecture. observation shows that a once wistful, spastic kid has been transfigured into something workable, something wondrous.

to the TECHMAN once established in his own little ether, there is little meaning to the sheepskin, which is now probably buried in the attic under some old tech newspapers, the only college relics or worth he has saved is a ripe memory and a great faith in the flush of knowledge. he is no longer provoked by image seekers or pragmatic dealers in status, his mind is swept clean of the woeful trivialities he once conspired against. yet, for the sake of his children or a good glass of beer, he can promptly recall those magnificent football rallies and the final playoff victory over coast guard.

any image that grew out of the tech is a matter of fortune. to some who find competition a means of survival, a firm image at college is essential. but the image often quoted in the college catalogue has little application to the current stock of students, our benefactors were great men indeed, but lousy rah-rah boys. in our distillation pot of new england conservatism, a well instituted panty raid would be a revolutionary catastrophe. let vassar, harvard and yale line up another sex scandal for the press and potential high school applicants—tech daringly offers a new course in evolutionary biology.

no, in our self-created, self-contained imagery, there is no morey's, no harvard square, and no all american football team. unfortunately, in popular opinion we are only a large carton of eggheads, well equipped with the long haired, absent-minded professors. sometimes, we are even considered intellectuals. but there is no evidence that our hell-raising ability has been dulled by this. we are very capable of holding a ban-the-war conclave, or a race-riot, or even of staging a siege of the countryside. but for the cause of education, the lehr and the kunst, what is the absolute value of such? we must think in terms of our intellectual experience, and leave the images for the needy. we find no urgency to latch onto a dream.

but—"YES, VIRGINIA, THERE REALLY IS A WORCESTER TECH."

dedication

of all the species of man, the engineer has the unique ability of expressing nearly any physical maxim in the universe, however, when dedicating some personal monument in appreciation for someone, a treatise of mathematical equations and graphs bound in light green folders is hardly warmth. so, we hope that the dedication of this treatise on the TECHMAN will speak for the muted.

professor richard neil cobb...

may this convey our honor for you; our appreciation for your services, your understanding, and your tolerance of our follies both inside and outside of the math book.

meet this man storke:

*the master of our fate: the captain of our school.
 he is a man, indeed, one of image, of tolerance,
 of understanding, of . . .
 a man who once held esteem for those he enhance
 a man who once held the salutes of peers;
 a man who once held the hearts of allies;
 a man who once held the trust of foreign lords;
 a man who once held a rifle;
 a man who now holds a slide rule.
 you see, he is just a tech sophomore:
 only a student like you and i.
 but, aren't all men students, no matter how many
 honors they held, nor how much income
 tax they pay?*

harry p. storke

the faces and figures you encounter here are the results of physical limitations. science allows us only to present an orthographic projection of an n-dimensional being. the professorial realm is a concept of psychological as well as sociological consideration. so strange is the professor, that one might believe him to be a twentieth century version of some homeric hero. he transcends most of the mundane from the time he leaves his house in the morning to the time he dismisses his last class. in the meantime, he makes it his moral duty to inspire and transfer: he can never better distinguish himself in his work than by encouraging the clever pupil, for the true discoverers are among them, as comets among the stars. his style is the man himself. his genius is nothing but a great aptitude for patience. and though we imagine ourselves to suffer under his conspiracy with truth, we purchase his sophistry for future reference and for final exams.

chemical engineering and chemistry

professor wilmer kranich
head of department

the days of alchemy are fading into the back pages of the sixth grade history readers, but the fast pacing advances of the modern day chemist and his third cousin the chemical engineer are filling our scientific journals with a new brand of hocus-pocus. nowadays instead of waving a magic wand, you just turn the magic "crank" and the inserted formula does all the dirty work. nevertheless, one must tip his cap if one expects to bring it unharmed through the chem building.

seated: prof. robert wagner, prof. robert plumb, prof. wilbur bridgman, prof. wilmer kranich. standing: prof. john meader, prof. kenneth roettger, prof. john petrie, prof. william hobey, prof. james huheey, prof. frederic butler, richard wonkka.

civil engineering

professor carl henry koontz
head of department

without a doubt, the most lampooned creature in all of the technological universe is the civil engineer. by the very nature of his work, the stigma of his department is an obvious one. he is never unnoticed: his presence in a crowd is unavoidably sensed. to some idealistic academicians the work of the civil is everything but civil: "indeed, man's art of block-building passed with infancy as did the anal stage in his development." some psychoanalysts have resolved the works of the civil to be the direct results of an "edifice complex." yet, for our persecuted friend there is an enduring pride in spanning a bridge or in tunneling through a mountain in his volkswagen. besides, there would be more than strontium-90 in the atmosphere if we didn't have his sewers.

prof. carl meyer, prof. richard lomothe, prof. b. allen benjamin, francis defalca, prof. a. fattah chalabi,
prof. robert fitzgerald, prof. joseph sage, prof. corl koontz.

a.s.c.e.

electrical engineering

some people cannot rationally comprehend why so much fuss is made over a few electrons. yet just think if we spent our time being frustrated with something as big as a cement block or an automobile engine. we find it a vain honor to be muddle-headed in science. we reverse simplicity and vice versa. what would science be if it weren't for the lucidity and symmetry of the ee electron philosophy?

dr. glen richardson
head of department

standing: prof. gilbert owyong, prof. richard beschle, prof. george stannard, prof. russell krackhardt, donald eteson, prof. habart newell, prof. romeo maruzzi, prof. william lacke, prof. william raadström.

mathematics

elliott buell
head of department

for the mathematician, the only accident in the world of symmetry is man. and now that we have been replaced by his machines of omniscience, even the human factor is obsolete. one might observe that the student in this isolated sphere is interning in the stratton ward until he finds some other reason to live. hopefully, the math major may realize that some unconscious interest in another department may restore a feeling of happiness in disorder. nevertheless, as sterile and naïve as his existence may seem, he has lain down the laws of integration in black and white.

first row: prof. vincent cannally, prof. richard cobb, prof. william hardell, prof. bruce mcquarrie, prof. william miller, richard olsen. second row: prof. ramon scott, prof. gordan branche, peter christopher, prof. elliott buell, prof. john van alstyne, prof. ralph nelson, prof. philip shakir.

mechanical engineering

from the day that daddy brought home the bright red corvair, i knew i would become a mechanical engineer. for the three weeks that mom and dad went on vacation, i rebuilt the car and added an extra 200 horsepower. i knew then that i would be an m.e. some day at w.p.i. i had the mechanical aptitude. i knew i would eventually go on to detroit after graduation and design cars for the future. but things are not what they seem, especially thermo and heat transfer. instead of learning about ferrari and corvette engines i learned about steam and carnot engines. i guess if i don't get into real modern concepts i'll take gas somewhere else. maybe i'll open my own gas station.

physics

professor allan parker
head of department

there are diverse and numerous events occurring in man's youth that indicate what he will be in college and in life. for the son of harvard law graduate, there is little hope to become an astronomer or music major. for the boy who shows aptitude and appreciation in the aesthetics, art is the only path. and the engineer is the fellow who does well in high school math, likes to tinker and doesn't know shakespeare from a pronoun. however, the signs of the physicist are unique and innate. as a child, he is frustrated, unwanted, and happy; he communicates with himself and those few who understand him such as trees, clocks, stars, ceilings, daisies, pigeons, and the ghosts of newton and einstein. as a TECHMAN, he lives the same life, and get a b.s. for it.

seated: dr. benjamin woolen, professor richard morton, dr. allan parker, dr. jerald weiss. standing: professor harold hilsinger, professor donald howe, george riley, dr. louis gronoth, dr. rolf heller, dr. roymond goloskie, dr. john wild, dr. john johnson, robert long.

a. i. p.

economics, government, and business

the study of economics is not an unwise choice of the engineer. whether samuelson or the department itself makes any mark in his mind, the student will appreciate the basic definition of economy when looking for a job or when shopping for guns or butter. yet we cannot take too much of this abstraction seriously, or we will find ourselves more concerned with money rather than with technical satisfaction. this may consequently result in unhappy engineers transferring into law or medicine for the sake of money only. now isn't that a silly thought?

prof. albert j. schwieger
head of department

prof. thoddeus roddenbery, prof. nicholas onorato, prof. albert schwieger, richard aronson, prof. joseph zimmermon.

english

for the benefit of the ignorant, this department does not serve to instruct one in the learning of a language. however, the need is pertinent to many here. the purpose of the english course is not to revive some nightmares created by similar studies in high school, but to cultivate if not culture the mind in college. though many issues in the novel find little comfort in the lab, some people may retain moral instructions derived from a guy named aristotle or shakespeare. and to those observers who think that the engineer is a narrow fellow, why we even have elective courses for the upper classmen who just cannot substitute the anthology for the handbook.

prof. edwin higginbottom
head of department

standing: prof. james hensel, george diamond, prof. david mckay, charles heventhal, prof. richard roche.
seated: prof. arthur kennedy, prof. edwin higginbottom, prof. theodore packard.

history and modern languages

providing a broad background for the engineer in the course of human events, history at tech has carved its rightful place in the minds of the scientists unconcerned. anarchism seems to be the answer for some, while getting married before he can be drafted is the answer for the rest. loopholes in the governmental system seem to hold the greatest prestige with our budding youth, but he unknowingly is cajoled into learning a few important facts about his predecessors on the earth at the same time. frequently in a liberal arts course such as this, it gives the student an excuse for not having time to study his "more important" scientific studies.

prof. leland atwood
head of department

james mooney, prof. donald johnson, prof. leland atwood, prof. claude scheifley, prof. arthur back.

physical education

professor robert w. pritchard
head of department

the athletic department never claimed to convert high school fat to college muscle, nor do they grant a degree of tyrannous strength to the 110 pound weakling after two years. in addition, there is obviously no academic merit derived from a few dozen push-ups. then to the greek philosophers who worshipped the paths leading to a strong body and strong mind, the w.p.i. athletic department is useless and absurd. but let's face it, for a half credit even plato would run around a track five times. besides, if one is odd enough to neglect his body or a good basketball game, he can always find a spare mat to stretch out on and study his physics.

frank grant, leo jansson, prof. charles mcnulty, prof. robert pritchard, prof. merl norcross, alan king.

military science

there are always some idealists who are convinced that the erudite and soldier should not overlap in the same body. however, the option is that of the engineer as to whether he pursues his degree with a slide rule or a rifle. nevertheless, rotc trains the officer without denying the existence of his b.s. degree. the engineer is given the option of applying his engineering talents either in industry or in the army. the benefits of each are relative, not compulsory. we have two years to decide whether we want to shackle ourselves to the ideals of others: is it necessary for the intellect to respond to a national cause, or is it imperative? the organization of the army is just this option, the american option.

first row: sp. 5 ernest piccirillo, sfc malcolm leavitt, sfc donald henry, m/sgt. john stewart, s/sgt. vernon johnson. second row: capt. james dorsey, capt. john mcloughlin, capt. gregor young, lt. col. gardner pierce, maj. melvin messer, capt. norman smith.

lieutenant colonel gardner pierce
head of department

the being is confused.
he's a mere consciousness trapped in the eddy of some
monstrous, academic vortex.
constantly he's buffeted by tiny balls of insignificant mass.
he's caught in the labyrinth of wires and chattering networks.
he is suspended from a multitude of free body diagrams.
he peers out from a misty vile of the alchemist . . .
now there's a vision; a dream has returned.
the ego screams out; it must have identity.
a way to survive has risen around him.
blindly he clings; his soul is made master.
outward he leaps to the grounds of mind's safety.
soon drunken with life, the need is abating.
the ego is appeased, his mind turns complaisant.
from a chunk of free thinking, he molds his escape.
he joins a club.

in us is a desire, a desire which calls for a physical overwhelming of an opponent. civilization has tamed this desire and now we have rules governing its extent, purpose, and duration. we have ourselves racing a clock as well as other men, resisting the pull of gravity rather than the clutches of a hungry beast, propelling an odd assortment of balls into nets rather than at tomorrow's dinner, and restraining other men from achieving some arbitrary position rather than protecting one's life or property.

here once again society has provided man with one of its artificial pacifiers. if one cannot participate openly upon the well defined "battle" area, he may scream and yell as an observer, thus quieting his own animalistic tendencies.

the thrill of the game is still there, however it is just a game.

fencing

if we can analogize the attainment of honor in life to the purchase of fish in a supermarket, we might begin with the primacy of opportunity: both are feasibly attainable commodities open to the general public. of course, the clever mackerel-shopper may hunt all day thursday until he finds the best specimen for his next evening's meal, whereas someone else may disregard the year's best catch of mackerel for a flank of shark or cod. the purchase owes its worth only to human fancy. honor, too, is at the mercy of relativism and fancy. we interpret honor to satisfy a moral appetite. however, the oyster, which too is subject to personal savor, offers rarely the prize that all men desire: the pearl. praise, like the oyster's pearl, owes its value to its scarcity. it is a matter of chance not choice that the pearl is found. some people hunt the pearl rather than the oyster: their honor is then a means to an end of praise. others do not speculate such an end; they only shop for what they believe to be honorable. the men you see here are those patrons of honor who have made the right catch and have gotten the pearl.

the fraternity is alive. it finds life from a single source, its brothers. it is self-governing, self-sufficient, and lives purely for its own sake. each fraternity is unique; each is a reflection of its members. who are these men? they are the leaders, the followers, the dreamers, the bashful ones, the athletes, the brains, the playboys, the artists, the writers, the engineers. each is different, each is sincere. they are bonded by a concrete concept of brotherhood: a concept that expands or diminishes, but one that is necessary. a brother is an organ, only one of many that must function to keep the fraternity alive.

it would be naive to say that we are just TECH-
MEN without further considering the symphony
of complexities that constitute all men. we are
not a unique brand. there is no quasi-TECHMAN,
no stereotype, no one image. we are an aggre-
gate of the highest rationality, the most delicate
passions, and the purest individuality. from our
principles of cause and effect to our maxims on
human propriety we differ. we are none the like;
yet, we are fragments of the same egocentric
stock. and here we are before you in our final
stance of academic warfare. we have won. yet
not without having lost a bit of youth. that which
remains is what some may consider maturity and
what others hope to be engineers. we still like
to believe the entity endured and the intellect
sustained. appreciate us for yesterday's endur-
ance . . . respect us for tomorrow's attainment.

tech student

john f. kennedy

bill duvall, treasurer; don foley, john braun, tech. senate.

bill reiger, chairman; kevin mcquaid, bob loring, tech. senate.

1967

the staff has attempted to make the '64 peddler unique in the realm of yearbooks. often, they serve as the outlet for criticism and ridicule of their campuses. this can be carried overboard for the sake of selling the book. this year's staff is opposed to this type of journalism.

rather, the staff feels that a yearbook is dedicated to recording the events that form campus life. this year we cited the TECHMAN. we have objectively studied him and the role he plays in tech's existence. this was, needless to say, a formidable task.

as a result, the '64 peddler has meant a great deal of labor from inception to birth. however, the aftermath was satisfaction and pride.

personally, as editor, i can not express enough thanks to my staff for their cooperation, work, dedication, and eagerness in turning out this book.

my thanks to:

tom; who balanced the scales with conservatism

buster; who quit because of the impossible assignments yet made
every deadline

gosh; who's mind is superseded only by an aquarium

don; who sold these damn books so we made a profit

pete; who amazed me and himself by selling all the ads in two days

gene; who's direction of make-up was invaluable

dave; who's eagerness was demonstrated in his quest for
something to do

the staff; who did all the labors involved in constructing the book

bob moore; who is o'toole's representative and an editor's friend
in this book

aftermath

we have all heard it said that khrushchev will bury us. this can only mean that the rate of nuclear warheads produced in russia today is greater than that in america. and what is the cause of this fallback in the capitalist-communist race for nuclear supremacy? why have freedom-loving, god-fearing, civilized men such as we not been able to produce more warheads than the russian war-mongers? the only reason is that we do not appreciate our true capitalistic cause. yes, there is peace in nuclear warhead supremacy. and we have forgotten the source of this peace: the capitalist. but there is still time to avoid the grave. therefore, buy your warheads now by giving to the capitalist of your choice. here is a list of local warhead manufacturers whom we feel are dedicated to the true capitalistic cause: "warheads for peace."

IN THE HEART OF THE COMMONWEALTH

Worcester, known as The Industrial Capitol of New England, boasts a rare combination of industrial and cultural institutions. Five Worcester colleges have contributed substantially of their knowledge, research and personnel to local business, industry and culture. The more than 800 businesses in Worcester have done their part by providing services, consumer goods and jobs to raise the standard of living of Worcester residents to an unheard of high.

The same qualities which have made our city such a success are inherent in The Heald Machine Company. Those qualities are a firm foundation built on oldtime Yankee skill, and a promising future built into a modern plant and facilities as well as the use of the most highly advanced techniques in our research and development programs.

Heald holds to the premise and belief that Worcester will grow in proportion to the growth of its industry.

Every Heald machine reaches far and wide, bringing the name of the City of Worcester to the far corners of the free world on products labeled Heald.

Heald and Worcester have grown together. Heald looks forward to many more mutually beneficial years of growth in the Heart of the Commonwealth.

FORGING SATURN'S MIGHTY MUSCLES

When the nation's space prestige rides so completely on a single launch vehicle—as on Saturn V—designers, contractors and the National Aeronautics and Space Administration alike demand near ultimate levels in component reliability. Wyman-Gordon's participation in forging such a variety of airframe, structural, and propulsion parts for the Saturn program is most logical. Here is centered the industry's broadest aerospace forging experience—plus an outstanding concentration of

specialized equipment. Moreover, at Wyman-Gordon a uniquely integrated program of materials research and metallurgical/quality control certifies optimum part integrity and guarantees required properties of every component from huge thrust beams to tiny fittings. These Saturn configurations merely suggest the many space forging capabilities of Wyman-Gordon. For assistance on your critical forging problems, contact Manager Marketing Services.
